

CASE STUDY

**Matching Platform
for Investors and C-Suite**

Qalius client C2 Fusion Capital revolutionizes the way investors and public companies connect. The myCorporateAccess platform connects qualified investors with the C-suite so they can plan, organize, and execute great meetings on their own terms.

myCorporateAccess Matching Platform

C2 Fusion Capital builds strong lasting relationships between investors and public companies by bringing them together on the myCorporateAccess technology platform. Investors conduct important management interviews to make better investment decisions without going through banking intermediaries. Public companies present their strategy and milestones directly to interested investors. C2 Fusion Capital engaged Qalius to build the cloud-native myCorporateAccess platform on AWS, for scalability, security, and low ongoing operating cost.

Scalable

Implemented on services such as Amazon DynamoDB and AWS Lambda for automatic scaling to meet demand

Secure

Adopts a serverless application architecture to deliver end-to-end data privacy with cloud-native AWS services

Integrated

Pulls data from public sources to seed the development of new relationships

“

“Qalius’ approach to development has impressed us from day one. They have done an excellent job understanding our unique needs and translating them into a product that has exceeded our expectations. We are impressed with their professionalism and commitment to client satisfaction.”

Carlo Buffone, Founder
C2 Fusion Capital

At Qalius we are specialists in web applications built on AWS. We use the serverless platform from AWS to build scalable, secure, high performance applications that scale with low recurring cost.
