

CASE STUDY

Financial Services Portal

Qalius client Twenty-First Financial delivers customer financing solutions for the modern economy. Dealers in the HVAC industry, the trades, and small Canadian businesses get customized finance solutions with personal guidance from Twenty-First Financial's founders and executives.

Financial Services Portal

Twenty-First Financial designed their Financial Services Portal to empower their dealer partners financing solutions with immediate credit decisions and simple contract execution. The Financial Services Portal calculates loan payments with a few clicks. Dealers can send loan applications directly to the consumer's phone, and dealers and consumers can easily upload their supporting documentation. The Financial Services Portal is implemented by Qalius on Amazon Web Services for a secure and scalable solution with very low ongoing operating cost.

Cost Effective

Implemented with on-demand compute in AWS Lambda so cloud costs are incurred only when there is a transaction to process

Secure

A serverless application architecture delivers end-to-end data privacy with cloud-native AWS services

Integrated

Integrations to third-party systems provide instant credit approval, automatic banking verification, and seamless e-signature for contract execution

“

“Qalius is great to work with. I have partnered with them on multiple projects. Their work is always top quality, and comes in on-spec and on-budget.”

Adam Sugden, Vice-President Risk and Operations
Twenty-First Financial

At Qalius we are specialists in web applications built on AWS. We use the serverless platform from AWS to build scalable, secure, high performance applications that scale with low recurring cost.
