

CASE STUDY

Data Analytics Pipeline

Qalius client Dealer-FX transforms how automotive retailers manage their service operations. Dealer-FX data integrations streamline automotive service departments to increase efficiency, profitability, retention, and brand loyalty.

Business Intelligence Dashboards

Applications from Dealer-FX generate rich data about automotive service operations that is unleashed to deliver convenience, transparency, and consumer trust. Dealer-FX engaged Qalius to bring service operations data into their application suite with embedded Amazon QuickSight dashboards and federated identity solutions. Qalius and Dealer-FX implemented data preparation on the data lake housed in Amazon S3 using services such as AWS Glue and Amazon Athena.

Integrated

Dashboards rendered by Amazon QuickSight embed business analytics in the Dealer-FX applications

Secure

Identity federation effortlessly authenticates Dealer-FX application users and employees

Scalable

Data preparation services scale seamlessly to rapidly and cost-effectively serve data from a data lake on Amazon S3

“The Qalius team did a great job implementing Amazon QuickSight from the start to the end. Their level of expertise on AWS is exceptional. We look forward to future collaborations.”
